

@luca.salzone/pjclient

The Project Client is a command-line tool that you use to initialize, update and run any project.

Installation & Usage

```
npm install -g @luca.salzone/pjclient
```

Create project configuration with commands

```
{
  "commands": [
    {
      "name": "install",
      "options": [
        {
          "name": "bl",
          "cmd": "svn co <url-snv>"
        }
      ],
      "commands": [
        {
          "name": "install",
          "options": [
            {
              "cmd": "cd trunk"
            }
          ],
          "commands": [
            {
              "name": "install",
              "options": [
                {
                  "cmd": "mvn clean install"
                }
              ],
              "stopOnError": true
            }
          ],
          "stopOnError": true
        }
      ],
      "stopOnError": true
    }
  ],
  "stopOnError": true
}
```
