

@luca.salzone/pjclient

The Project Client is a command-line tool that you use to initialize, update and run any project.

Installation & Usage

```
npm install -g @luca.salzone/pjclient
```

Create project configuration

```
{
  "commands": [
    {
      "name": "install",
      "options": [
        {
          "name": "jaxrs",
          "cmd": "mkdir jaxrs",
          "commands": [
            {
              "options": [
                {
                  "cmd": "git clone
https://github.com/lucasalzone/jaxrs_example.git jaxrs",
                  "commands": [
                    {
                      "options": [
                        { "cmd": "mvn clean install
-DskipTests -f jaxrs" }
                      ],
                      "stopOnError": true
                    }
                  ]
                }
              ],
              "stopOnError": true
            }
          ]
        }
      ],
      "stopOnError": true
    }
  ],
  "stopOnError": true
}
```

and run *pjclient*

```
pjclient install jaxrs
```

With this configuration you

- create a new folder
- clone repository
- run maven build
