pjclient

The Project Client is a command-line tool that you use to initialize, update and run any project.

Installation & Usage

```
npm install -g pjclient
```

Create project configuration

```
{
 "commands":[
    {
        "name":"install",
        "options": [
         {
            "name":"jaxrs",
            "cmd":"mkdir jaxrs",
            "commands":[
               {"options":
                [
                    {"cmd":"git clone
https://github.com/lucasalzone/jaxrs_example.git jaxrs",
                    "commands":[
                      {"options":
                       [
                         { "cmd":"mvn clean install -DskipTests -f jaxrs"
}
                       ],
                    }
                 ]
                }
             ],
          }
       ]
     }
     ],

     }
    ]
 }
```

and run *pjclient*

```
    pjclient install jaxrs
```

With this configuration you

```
- create a new folder
- clone repository
- run maven build
```
